

GREEN, EVERY STEP OF THE WAY

TRUST RISO TO DELIVER ON ITS PROMISE OF PROMOTING A CLEANER EARTH.

RECYCLED PARTS MAKE THE MOST OF MORE

To go easy on the environment, both before and after usage, ink cartridges for the ComColor X1 Series are made partially from recycled components. Moreover, the cartridges can be easily disassembled into component parts to make disposal easier.

The structure of the cartridge makes it easy to collect, reuse and recycle.

REDUCING LC-CO₂ AND ENVIRONMENTAL BURDEN

Design and development of the ComColor X1 Series is based on results obtained from lifecycle assessment (LCA). This both improves performance and further lowers environmental burden by reducing LC-CO₂ rates by approximately 31% compared to our previous models.

The amount of CO₂ we saved from previous models equals 0.65 tons, or about the amount 46 cedar trees (80-years old each) absorb in one year.

Note: Entire product lifecycle, from collecting materials, development and production through shipping, usage and disposal. Figures based on RISO research and analysis.

ECO-PROVEN PERFORMANCE WORLDWIDE

The acquisition of and compliance with various environmental labels and directives from around the world are your assurance of the ComColor X1's green performance.

ENERGY STAR® PROGRAM

An international program that promotes energy saving in office machines. The program sets standards in terms of the power consumption of office machines in each of the operations, sleep and OFF modes*.

*Varies according to region.

REACH REGULATION

European Community Regulation on chemicals and their safe use. It deals with the Registration, Evaluation, Authorisation and Restriction of Chemical substances.

RoHS DIRECTIVE

European Union directive on the restriction of the use of certain hazardous substances in electrical and electronic equipment.

ErP DIRECTIVE

European Community's directive that requires eco design be employed for energy related products.

PRINT FAST, GO GREEN

AN EARTH-CONSCIOUS WAY TO SPEED UP PRINTING AND INCREASE OFFICE EFFICIENCY

Let RISO show you how ecology and productivity go hand in hand.

PRODUCTIVITY PLUS

INCREDIBLY FAST PRINTING WITH ECO-EFFICIENCY

Each print job finishes faster, reducing printer operation time.

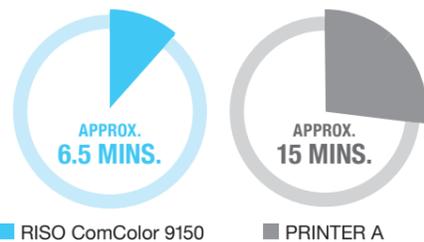

PRINT AT 150 PPM vs 65 PPM

The ComColor X1 Series vastly reduces the time spent printing, a real plus that saves energy while eliminating printer bottlenecks that can have a negative impact on office operations.

RISO ComColor 9150 SPEED ADVANTAGE

1000 SHEETS

A4-size pages in full colour.

■ RISO ComColor 9150

■ PRINTER A

CONSIDERABLE PAGE COST REDUCTIONS

By decreasing printing time, the ComColor X1 Series uses less electricity than most other printers in its class. This results in significant cost benefits to you on electricity bills.

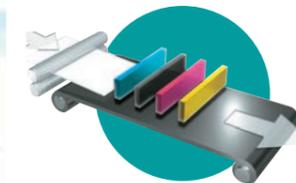

RISO ComColor 9150 POWER SAVINGS ADVANTAGE

1000 SHEETS A4-size pages in full color.

*1 Power consumption per page based on TEC calculation for ENERGY STAR® certified imaging equipment.

*2 Based on the average of four ENERGY STAR® certified printers with a print speed of 65 ppm.

LESS IS MORE

BENEFIT FROM THE INKJET ECO-ADVANTAGE

The ComColor X1 Series maintains a small environmental footprint

LESS POWER

COST-EFFICIENT OPERATIONS

Because no heat is used during the print-imaging stage, less electricity is needed, ultimately adding up to significant cost savings over the life of the printer.

LESS PARTS

OUTSTANDING DURABILITY

Inkjet printers have fewer replaceable parts than toner-based printers, resulting in fewer things that can go wrong for less downtime and maintenance.

LESS EMISSIONS

COMFORTABLE WORK ENVIRONMENT

Unlike toner-based printers, RISO inkjet printers employ an imaging process that eliminates potentially harmful ozone and toner emissions.

MORE ENERGY-SAVING FUNCTIONS

POWER SCHEDULE MODE

Administrators can set the printer to enter/exit sub-power mode at certain times and/or days of the week. Never worry about forgetting to turn the printer off after working hours or on the weekend.

SLEEP MODE

You can set the printer to automatically enter sleep mode when not in use, in order to decrease electrical consumption during periods of non-usage. This mode reduces power consumption to 5Wh, further enhancing savings on electricity bills.
