

NON-CONDENSABLE GAS (NCG) BURNERS FOR PULP INDUSTRY

BURNERS

Waste gases and liquids are converted into useful energy in special Strong Gas Burners. These burners are typically installed at recovery boiler or dedicated fire tube boiler.

FLARE INCINERATORS

Flare Incinerators are used as a stand-by back-up system. One burner can be designed to incinerate several fuels such as CNCG and DNCG gases, liquid methanol and turpentine.

- Odor causing compounds oxidized up to 99%
- High availability
- Reliable operation, no refractory problems
- High temperature stainless steel materials
- Very short start up time
- Low support fuel consumption
