

The next generation of male sling technology™ *only from AMS*

Innovative Procedure

- New transobturator approach for treating mild to moderate SUI
- The sling effects a proximal relocation of the urethral bulb which causes a circumferential coaptation of the sphincteric urethra
- The force of the sling is applied parallel to the urethral lumen, unlike compressive devices which apply force into the lumen

Promising Results

- Including the feasibility study, over 1,500 men have been treated with AdVance, with as much as 36 months of follow up data
- AdVance has been successful in treating mild to moderate SUI with some short term retention and no erosion

The next generation of male sling technology™ *only from AMS*

New mesh and needle technology!

All AdVance components have been designed specifically for use with the male anatomy

Patient Selection

- Mild to moderate SUI
- 1-5 pads per day
- Post RP or TURP
- Residual sphincter function
- Prior radiation is ok

Procedural Information

- Minimally invasive
- Outpatient procedure
- 20-30 minute case time*
- Spinal or general anesthesia
- Does not preclude future AUS or penile prosthesis
